»Q: Imaging software in python I'm having a little trouble identifying a suitable imaging library/toolset for python. I'm a PhD student interested in image analysis and would like to write some code in python that opens a file, does a simple operation on it and saves it to another file. It does not need to be very high-performance - maybe twice as fast as a simple 'convert' would be fine. I have found PySIFT, which I think covers a lot of ground but appears to be basically deprecated
