--- SUNRISE A young boy watched a girl he liked boarding a train to her destination. He gave a farewell smile and then, listening to her quiet voice beside him, fell asleep to the sound of her tears. The girl is crying, he's asleep. One day, he will meet someone who will awaken him and will become a part of his life, only to be an encumbrance in the end. He won't know. He won't care. Because he will be elsewhere, in another world. He will never return... The boy's name is Sun. The world in which he wakes is a world in which his death will be a reality. An amalgam world, in which a person of different age and gender possesses the same body and where people disappear without a trace after sacrificing themselves for the other. An amalgam world called the Lands Between. Sun wakes in a new world, with a new name. His life is changed again and again. He slowly realizes his true identity as an Elden, one of the people of the Lands Between. He is called the Tarnished Lord. This is the tale of his struggle. Based on an idea by @myplacesticky! .Face of the World; "The most outstanding feature of the game is the massive variety of the story, and also the fact that the story is split up into a considerable number of episodes, which makes the game very easy to immerse yourself into." Elixir; "The graphics and characters are well-drawn, and the battle system isn't so troublesome as to make it hard to enjoy." NewRPG; "What I liked the most about the game are the special skills. The characters that we have as we progress through the story all have their own special skills. These skills can be learned using the "special skills" class. There are 8 different special skills." Pia.Co; "There are 8 chapters that are connected to other chapters to create a story. The stories of the individual chapters are depicted through the eyes of different characters. The game takes place in an RPG-like setting, with a little of FPS as well. The game itself is quite well designed, with plenty of good graphics and detailed customization options, but also quite complicated to understand." APBEL; "The story of the game is very unique. However, because it is extremely long, it takes a long time to actually finish and play the game. Compared to other games, it is a pretty simple game, but it has a nice art style, unlike many other actions games." Sekiro Gaming; "I found the game to be pretty addictive, and one of the better games to play. The game system itself is pretty simple, and the difficulty should be accessible to players who aren't too experienced with it, so I suggest it to new players." Elixir Corp; "The main character, Reise, gets better every time you play as him. The story's simple and character design is very easy to understand. The art is quite well drawn and detailed. The game features really good sound effects, as well. There are plenty of other things that I enjoyed in the game, though I wouldn't recommend it to any and all people." GAMR WORLD; "The game has a good art style, and it has a fun combat system. The game's difficulty may be a bit too hard for some players. However, it's a game that will satisfy those who are looking for something that feels like a real action RPG." bff6bb2d33

Hybrid approach to create hatching and natal environments in a ludic construction of color-coded building blocks. Reproductive strategies are an important and often overlooked component of innovation and the evolutionary success of an ecological community. One of the dominant modes of selection among different ecological communities is mediated by abiotic and biotic parameters inducing differential reproductive success. In this work, we present a novel variation of mass mortality-induced reproduction in an artificial ecological community made up of two distinct populations of bacterial slime molds. One population responded to a changing environment by relocating away from the unfavorable growth conditions and by spawning, being therefore the dominant one. The second population, even after having triggered sporadic mass mortalities, continued using a dormant state to outcompete other populations at the bottom of the container. We also demonstrate that it was possible to create the abiotic and biotic conditions to favor one population by applying appropriate colors to the blocks that were used by the members of the defined group. Due to this, the number of progeny of the population can be increased by several fold thus optimizing the chances of survival as new niches are discovered. Although further work needs to be carried out in order to discuss the multiple evolutionary implications of the proposed approach, we believe this is a viable alternative to the current methods of generating strong selective pressure in microbial communities.system to help protect consumers, reduce budget spending and increase functionality.
