To give you an idea of its importance, the Linux Mint team estimated that 2.4 billion hours were spent on CAD-related activities in 2016, which is the equivalent of more than 90% of the workforce of the whole world. Many users know that there is also a free version of AutoCAD, which is licensed as open source software. The free version is only available on Windows, Mac and Linux, though it is possible to use the Windows version of AutoCAD on Linux. If you are looking for a free AutoCAD alternative on Linux, open source software like KiCAD, Jolicloud and Krita are very good choices. AutoCAD is also available for mobile devices. Apple iOS and Android are the leading operating systems for smartphones and tablets. The total market for AutoCAD in 2016 was close to $1.43 billion. Windows, Linux and Mac AutoCAD is available for Windows, Linux and Mac. You can install the application on any of these operating systems. Most users of Linux, however, prefer a Linux distribution that looks very similar to Windows. Linux Mint is a good option. Windows users can install AutoCAD using the online installer. Mac users can install AutoCAD using a standard installer downloaded from the developer's website. AutoCAD and the Linux distribution In this tutorial, we will install the AutoCAD version 2020 SP1 on a Linux operating system. You can install AutoCAD on any Linux distribution. In this tutorial, we will install AutoCAD on a Linux operating system running the distribution Linux Mint. The very popular Linux Mint distribution is based on Ubuntu. It includes all the features of the Ubuntu operating system, and adds a lot of functionality that is missing in the standard version of Ubuntu. You can install AutoCAD on Linux Mint using the Snap Store. In this tutorial, we will use a terminal emulator to install AutoCAD. If you prefer to install AutoCAD using the terminal emulator console, you can skip the Snap Store installation and just click the terminal emulator button in the desktop menu. Linux Mint installation Go to the Linux Mint website. Download the latest version of Linux Mint. Open a terminal emulator and login as root. Change the file

Q: How can I map multiple values to a column in a dataframe? I have a dataframe that has a location column. I have another dataframe that maps a city to states. For example: df = pd.DataFrame(['a', 'b'], columns=['location']) df_states = pd.DataFrame(['city1'], columns=['state']) What I'd like to do is map the locations in df to the states in df_states and combine them so that the final output would be the following: df_final = pd.DataFrame(['a', 'b', 'city1','state1'], columns=['location', 'city','state']) I've tried using a dictionary but am having a hard time figuring out how to map multiple keys to a column. What is the best way to do this? A: Use join with DataFrame.set_index and DataFrame.rename_axis: df = pd.DataFrame({'location':['a', 'b'], 'value':[1,2]}) print (df) location value 0 a 1 1 b 2 df_states = pd.DataFrame(['city1'], columns=['state']) print (df_states) state 0 state1 df = df.set_index('location') print (df) value state location a 1 state1 b 2 state1 city1 NaN NaN df = df.join(df_states.rename_axis('city')) print (df)
