Equation of Curvature: In a curvature calculation, determine the tangent and binormal to any point in a curved path. The line that is perpendicular to the two intersecting tangents is a circular arc and represents a regular curve. If the arc is no longer circular, the curve is irregular. The equation of the curved path can be used to describe both regular and irregular curves. (video: 2:06 min.) Elevation Mapping: Use the automated point mapping tools to find elevation points, then calculate elevations along a path. Create a PDF file of the elevation results so that you can easily create elevation labels on your drawings. (video: 2:46 min.) Geomarking: Add text, symbols, and images to your drawings, and quickly create layouts. Geomarks are standalone objects that can easily be reused. Add shapes, text, images, arrows, and more to your drawing. Display them as an object, path, or as a label or symbol. You can geomark a symbol from within AutoCAD or use Autodesk Design Review to export a symbol that you have created from your own graphic software and import it into your AutoCAD drawings. (video: 1:46 min.) Graphic Styles and Filters: Categorize your imported vector drawings into colors, weights, line widths, and linetypes. Create a new style to quickly assign that category to any imported drawing. Create new styles that you can edit to add line colors, line widths, and linetypes. Dimensional Editing: Edit and dimension details with the new Dimensioning dialog. Easily edit units, unit displays, and table columns, and then make text modifications to a field. You can also add a series of lines to a dimension. Multi-View 3D: Combine blocks into a multiview model in 2D space, or use the 2D+3D command to view the block planes in 3D space. With Multi-View 3D, you can then use 3D tools to work with the blocks in 3D space. You can also draw a wireframe to show the block structure. (video: 2:00 min.) Pyramids: Define a 3D curve using geometric math and define the curve's center, radius, direction, and rotation. Scaling:
