Q: How to create jquery function to change the image at a time intervals I want to change the image at a time intervals. I have a two button. When I click on the first button I want to display the image A and after 5 seconds change to image B. and when I click the second button I want to display the image B and after 5 seconds change to image A and this time 5 seconds are changed. A: You can achieve this by using setTimeout and clearTimeout in jQuery. You should have a function for changing the images. You can achieve this easily with the following jQuery code. `$(document).ready(function(){ var time = 0; $('#img').attr('src','image_path'); function change(){ $('#img').attr('src','new_image_path'); time = time+100; if(time>2000){ time=0; } setTimeout(change, time); } change(); });` Q: Is there a shorter, single line alternative for Rails' method_missing? I've got a set of methods that will often be called, but don't respond to anything. Instead of hard-coding the call to method_missing, I'd like to use a single line if possible. Current: `method_missing :foo` How can I do this in a single line: `method_missing ::foo` A: Check out `method_missing` in the Ruby documentation. This has changed in the last few versions of ruby and may be the reason why you have to use the `:method_missing` method.
