I missed earning news when I was on a business trip to Canada, but I've been following along with other video blogging sites via Twitter, Facebook and decided to catch up on the news on the YouTube video since this is what I find myself viewing the most. YouTube isn't that hard to use and is actually a good place for photographers to show off their work. It's been like déjà vu as we've come across another big release from the industry leader—but this time with a slew of new features that Adobe hopes will make collaboration with creative professionals a fun and easier experience. Designers, photographers and students are commonly faced with the task of finding the right reference image to demonstrate a certain concept. There are many different services on the web that help you find inspiration like Canva or Americatradingcards.com. However, different platforms and network errors can lead to missed or incorrect information usable in creative projects. SEROTINY is a new web service based in San Francisco that provides real-time data about copyright and intellectual property laws in the U.S. The announcement of Adobe's newest version, Photoshop CC 2020, was something of a curio for me, since I've been using the company's professional photo editing software, version 21, since it first came out in 2014. The latest release of Photoshop, version 2020, has a new focus on speed and efficiency, as well as an overall appearance that bears a strong resemblance to other upgrades of the software: a more streamlined and minimalistic interface.

The Brush tool is probably the most versatile tool in Photoshop. You can use it to apply layers of color, much like spraying the RGB channels, and you can also create a selection, alpha mask, or vector shape based on it. You can make several brush strokes simultaneously, then move them, duplicate them, or make them go through a series of steps if you need additional art. The Brush tool also features several features that make it much easier to control the brush quality and reduce pixelation. **What It Does:** The Brush tool allows you to easily create layers of color, much like how you would spray paint a wall using layers of different colors. It changes the opacity of each brush stroke the same way painting would -- you simply change the layer's opacity, and whether it is visible or not, to change the color of the brush. You can make several brush strokes simultaneously to quickly create a color gradient, then easily change the colors in the gradient. Selecting an area of a photo for use in another layer in Photoshop is a breeze. Just click once to create a selection, and then drag a box around the area. The selection will turn red -- the area inside the selection is "locked" and can't be edited; the outside area can easily be erased any time you want. Photoshop's eyedropper tool is very handy if you want to literally point and click on parts of an image to select them. This type of selection can also be made by clicking a pixel repeatedly, but the eyedropper is much more efficient and allows you to select what you want with the lightest touch. 933d7f57e6
